Motorcoach

Robust, versatile and comfortable

AVANCE 2050® M18

We at Kiel place great emphasis on research and development to create modern and creative seat technology. The products stand for innovation, sustainability and durability. Our passion for seats has not only convinced our customers for more than 20 years, but also allows them to respond perfectly to future demands such as increased comfort, style and enhanced passenger transportation. In North America, the company Kiel is based in Indiana and provides US Manufacturing.

recyclable / environmentally friendly / lightweight

AVANCE 2050® M18

The Avance motorcoach seat meets the customer's highest expectations and operating demands in tourist as well as public transportation. Due to its lightness in appearance and design, the Avance creates generous sense of space in the motorcoach. The ergonomically designed cushion and backrest provides maximum comfort for passengers and helps them relax even on long journeys. Multiple accessory options enhance the motorcoach interior and make the ride on the bus even more pleasant. The seat system is very robust and durable and thanks to its modularity easy to maintain.

Automatic recline reset system

One of the highlights is the automatic recline reset system for backrests. The backrest moves automatically from a reclined to an upright position as soon as the rider leaves the seat. This takes approximately two minutes. So, the next passenger finds a neutral seat position, and the person sitting in the row behind has easy access. The system also makes overnight and evening cleaning much easier.
